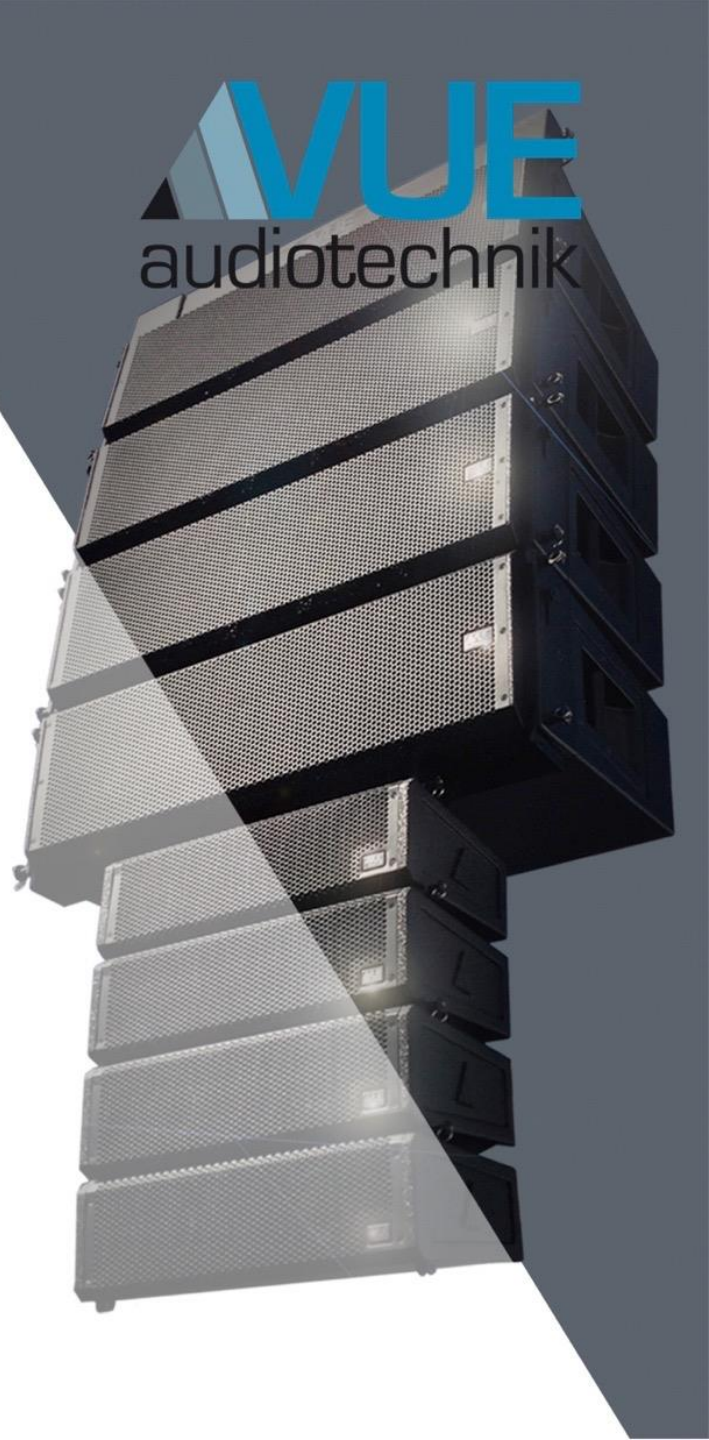
introduction

VUE AUDIOTECHNIK

Unflinching focus on innovation through technology, VUE Audiotechnik is committed to redefining loudspeaker performance



PURSUIT OF EXCELLENCE

Our continuing effort to move the state of the art in professional loudspeakers forward is what has driven us to our relationship with Audinate and the integration of Dante into our product range.

Thanks to our proprietary transducers used in all of our product classes, smooth integration using a combination of VUE's loudspeaker products, is simple

THE BERYLLIUM ADVANTAGE

VUE's revolutionary HF transducers are capable of delivering measurable improvements in everything from response linearity to output and longterm durability.

heart & soul

VUE audiotechnik

THE INTUITIVE ‘SYSTEMVUE’ NETWORK

VUE audiotechnik

seamless integration

- Every VUE DSP-based product was designed from the ground up to be a part of the SystemVUE™ network and to be able to accept DANTE, creating tremendous synergy at every level.
- From transducers, amplifiers and DSP, all the way out to the SystemVUE™ Software, work in perfect harmony to enable precise control and easy operation.
- All VUE DSP-enabled loudspeakers and V Series System engines ship with SystemVUE™ networking and DANTE capabilities already onboard. There’s no need for additional cards or retrofitting.
- SystemVUE™ networking technology connects all VUE DSP-enabled products to a computer or an, iPad allowing users to access any single product or an entire chains of them, through a highly intuitive user interface.

next generation dsp

‘V SERIES’ SYSTEMS ENGINES

At the heart of the V Series Systems Engines are powerful and fully customized integrated circuits that handle all processing and system management, including speaker protection, system-optimized alignment of EQ, time and crossover functions, as well as application EQ and SystemVUE™ network and DANTE capabilities.

VUE audiotechnik

PREMIUM POWERED SYSTEMS

VUE audiotechnik

h Class

Tight integration of transducers, amplifiers and next-generation dsp technology dramatically improves out-of-box performance and streamlines the h-class setup.

- The h-Class are SystemVUE & DANTE ready, the powered h-Class includes both wide (100º x 50º) coverage and narrow (60° x 40°) coverage full range speakers
- Powered LOW FREQUENCY extension lineup (hs-Class) is made up of three ACM*subwoofers.
- The h-Class monitors (hm-Class) are designed to pair with rack-mount V Series systems engines with integrated DSP and SystemVUE & Dante networking.

THIS LECTURE HALL

2 x h-12 High Definition Systems

¥ Massive 12-in woofer with 4″ voice coil for low distortion high low frequency and minimal power compression

¥ Neodymium HF compression driver with 4″ (100 mm) voice coil and Truextent® beryllium diaphragm for exceptional high frequency clarity and output

¥ Powerful built-in amplification with 830 watts LF and 275 watts HF power long term sine wave to each driver (more than 2400 watts total peak) for very high size-to-output ratio
- Integrated DSP with SystemVUE network control and monitoring
- DANTE enabled
